

Ajibola Ayomide Odeyemi

Data Analyst — Analytics, Dashboards & Applied Statistics

Oyo State, Nigeria · +234 916 902 0350 · ajibolayomide@gmail.com · [LinkedIn](#) · [GitHub](#)

SUMMARY

Data Analyst with a research background in physiology, utilizing SQL, Python, and BI tools to help teams understand complex realities. Experienced in processing diverse datasets to public infrastructure databases. The core of my work is transforming unstructured data into concise, actionable insights for non-technical stakeholders, prioritizing analytical accuracy and evidence-based decision-making over superficial metrics.

SKILLS

Languages & Querying: SQL (joins, window functions, CTEs), Python (pandas, scikit-learn), R

Modeling: Regression, classification (XGBoost, LightGBM), survival analysis, Monte Carlo simulation, Machine Learning

BI & Visualization: Power BI, Excel (Pivot Tables, Advanced Formulas), Tableau, Streamlit

Domains: Education/enrollment data, clinical research data, media & marketing analytics, SaaS product metrics, actuarial risk

EXPERIENCE

Data & Operation Analyst | Nestavie (Pre-launch Prop-Tech) | *May 2026 – Present*

- Developing the core data infrastructure and operational strategy for a prop-tech platform designed to eliminate fraud in the Nigerian student housing market.
- Engineering a low-friction data collection pipeline using WhatsApp Business and field agents to verify and digitize offline real estate inventory.
- Designing the backend tracking logic and quantitative pricing models to monitor user acquisition, micro-transactions, and B2B ad conversions.

Quantitative Researcher & Data Analyst | Reproductive Biology and Toxicology Research Laboratory (ReBTReL) / Oasis of Grace Hospital | *Oct 2024 – Present*

- Manage the statistical aspect of clinical research studies including cleaning of multi-variate datasets in R and Python, and conducting the inferential tests (t-test, ANOVA, regression) required for peer review.
- Processed large-scale datasets for various physiological studies, isolating the statistical trends that supported the final peer-reviewed conclusions.
- Collaborate directly with clinicians and lab scientists to translate complex statistical outcomes into clear, accurate language for medical manuscripts.

Data & Business Analyst (Intern) | SQI College of ICT | *Aug 2025 – July 2026*

- Collected, cleaned, and analyzed college enrollment and student-performance datasets (approximately 40,000 rows) using SQL to answer critical departmental questions and track operational bottlenecks.
- Developed and maintained more than 15 Power BI dashboards that replaced manual month-end reporting, allowing academic leadership to track real-time metrics independently.
- Communicated technical and operational requirements, converting problems in plain language into reusable SQL queries and automated reporting solutions.
- Wrote Python scripts to automate repetitive data extraction and cleaning tasks, dedicating more time to core analysis.

Operations & Reporting Data Assistant | Multichoice Nigeria | Jul 2021 – Sep 2024

- Extracted regional operational and customer data from four business units and analyzed it using Excel to monitor financial performance, investigate revenue leakage, and track subscriber trends.
- Maintained a weekly report on customer behavior and payment data, identifying and marking anomalies and areas of inefficiency for review.
- Managed data extraction and delivery timelines for concurrent reporting requests, maintaining strict accuracy standards across large datasets.

PORTFOLIO PROJECTS (among many more)

Insurance Risk & Anomaly Detection (self-built portfolio project) | [GitHub](#)

Python · SQL · Power BI · Streamlit · XGBoost

- Developed an end-to-end data pipeline to model how health insurance risk can be priced using claims-style data.
- Trained an XGBoost model on a synthetic clinical dataset (~55,000 records) to estimate risk-adjusted pricing, followed by a Monte Carlo simulation to calculate a 95% Value-at-Risk (VaR) estimate for underwriters.
- Improved the billing data by integrating an Isolation Forest model to find statistically unusual billing records and displaying the findings in an interactive Streamlit app.
- Developed a Power BI dashboard that provides a summary of VaR thresholds and the highest-risk cohorts for a non-technical reviewer.

SaaS Customer Churn & Retention Model (self-built portfolio project) | [GitHub](#)

Tableau · SQL · Python · LightGBM · Streamlit

- Built a machine learning predictive pipeline that identified at-risk SaaS customers before they canceled, directly helping with customer retention.
- Designed the foundational data schema, including 5 tables spanning usage, billing, and support, to track MRR/NRR trends in Tableau and identify revenue leakage.
- Applied Kaplan-Meier survival curves and trained a LightGBM model to assign highly accurate, dynamic "time-to-churn" risk scores to the active user base.
- Streamlined the handover between data and business operations by deploying the model via Streamlit, giving the Customer Success team direct, intuitive access to real-time risk predictions.

RESEARCH & AFFILIATIONS

Published Research — Frontiers in Cell and Developmental Biology, 2026 (Corresponding Author)

"Mitochondria in Health and Disease: Cellular Powerhouses, Signaling Centers, and Drivers of Dysfunction," Front. Cell Dev. Biol. (frontiersin.org/journals/cell-and-developmental-biology/articles/10.3389/fcell.2026.1929130/abstract)

- Acted as Corresponding Author, managing a 7-person research team to synthesize complex literature on mitochondrial pathology and novel therapeutic targets.
- Directed the manuscript drafting, submission, and peer-review processes, serving as the primary point of contact between the research team and the editorial board.

Published Research — Elsevier (Steroids journal), 2026

"Donepezil enhances the testicular protective effect of metformin in diabetic rats by modulating steroidogenic signaling and Bax/Bcl2/Caspase-3 pathway," Steroids, Vol. 228, 109748.

- Led the statistical analysis and data modeling in Graph-Pad, from cleaning the raw experimental data to performing the core hypothesis testing.

Coordinator, Biomedical Research Writing Group

- Coordinating ongoing biomedical research projects and managing 6 peer-reviewed journal articles, ensuring all statistical procedures and manuscripts are submission-ready.

EDUCATION

B.Tech, Physiology — Ladoke Akintola University of Technology, 2025

Second Class Upper. Coursework focused heavily on statistics and quantitative research methods, providing a strong foundation for advanced data analysis.

CERTIFICATIONS

- AI for Data Analysis — Google (Mar 2026)
- Diploma in Clinical Research Operations — London HeartbeatsZ Academy, UK (Jan 2026) (Udemy)
- Inclusive Learning Design — UNITAR
- Microsoft Certified: Power BI Data Analyst Associate — in progress
- Statistical Analysis with R for Public Health — Imperial College London (in progress) (Coursera)
